

# 1 Error propagation

## Quick summary notes

- Used amended  $\chi^2$  equation

$$\chi^2 = \sum_{i=1}^N \frac{(y_i - f(p_i; \vec{\theta}))^2}{\sigma_i^2 + \sigma_0^2}, \quad (1.1)$$

$y_i$  is the data value at  $i^{\text{th}}$  pixel,  $f(p_i; \vec{\theta})$  is the value given back by a Gaussian function at  $i^{\text{th}}$  pixel location,  $\sigma_i$  is the Poisson error and  $\sigma_0$  is quadrature scale factor introduced to increase the error.  $\vec{\theta}$  is the parameters of the Gaussian function.

- Gaussian equation used is

$$f(p; a, b, \sigma, \mu) = \frac{a}{\sqrt{2\pi}\sigma} e^{-\frac{(p-\mu)^2}{2\sigma^2}} + b, \quad (1.2)$$

where  $a$  represents amplitude,  $p$  indicates the pixel location,  $\mu$  is the mean for each peaks,  $\sigma$  is the width of the Gaussian curve and  $b$  is the background.

- $\vec{\theta}$  consist of  $a, p, \mu$  and  $\sigma$ .
- Selected  $\sigma_0$  of 6E4 and applied it to all of the spectral lines to get a decent error. This gave decent errors on peaklocation.
- For high intensity peaks chosen  $\sigma_0 = 6E4$  values would be too low, for low intensity peaks  $\sigma_0 = 6E4$  would be too high but on average it gave decent errors on the lamp data.
- Some example plots

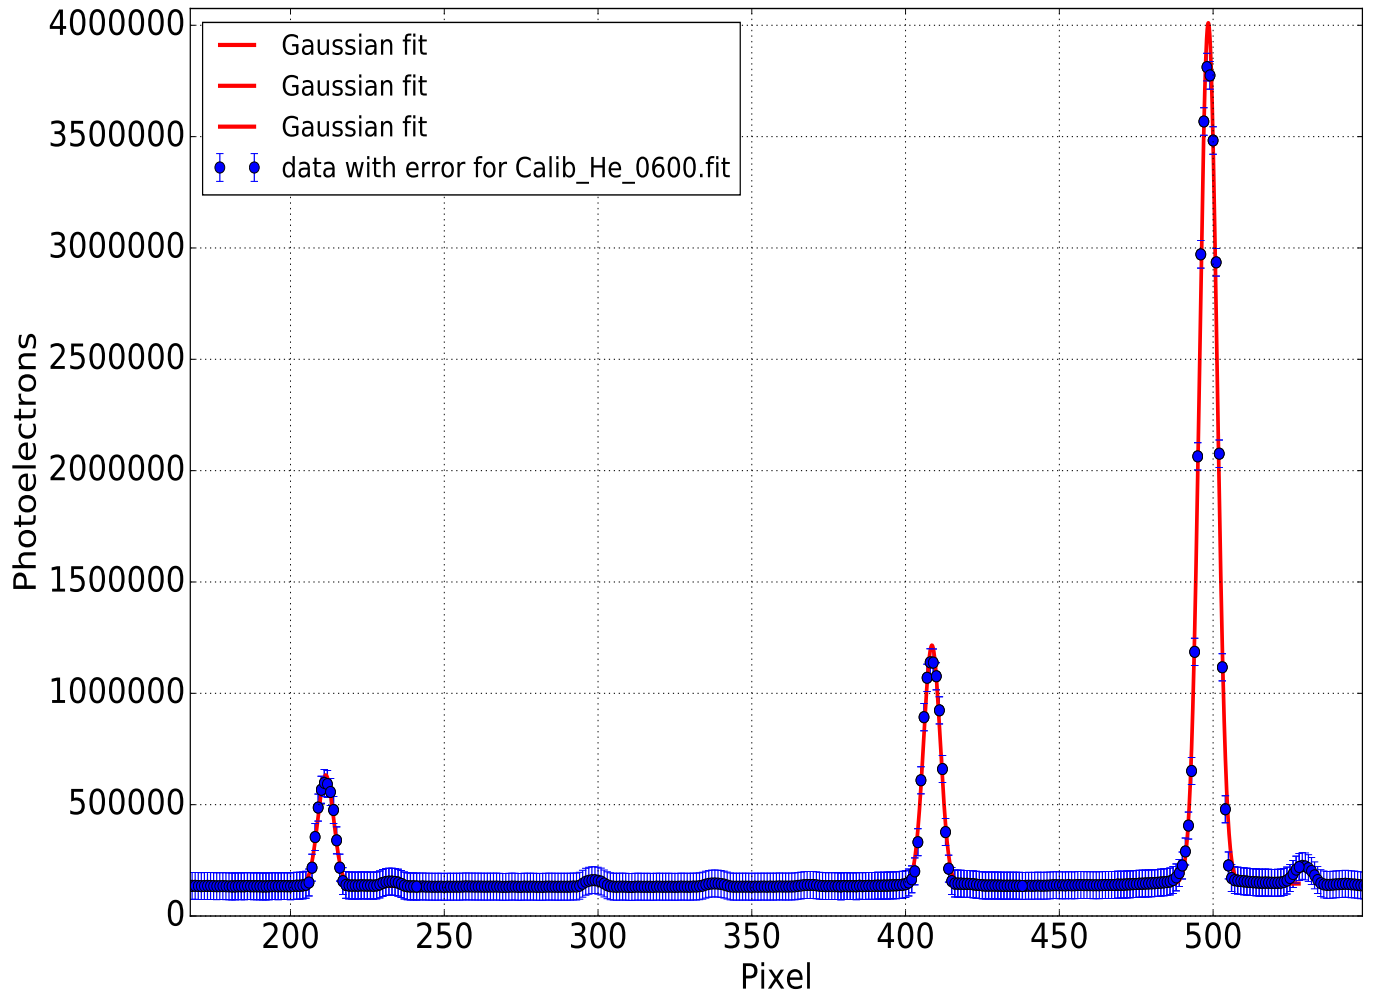

Figure 1: The error bar seems of reasonable value. For the first line the error on peak was 0.2053, second had error on peak of 0.0965 and third had error on peak of 0.0277. Their  $\chi^2$  was 2.96, 9.92 and 82.55 respectively. Ideally  $\chi^2 \approx N_{D.O.F}$ .  $N_{D.O.F} = 56$  for each fit around the spectral line. From the various  $\chi^2$  value it's obvious for line 1 and line 2  $\sigma_0$  is an overestimate, while for line 3,  $\sigma_0$  is around the selected value.

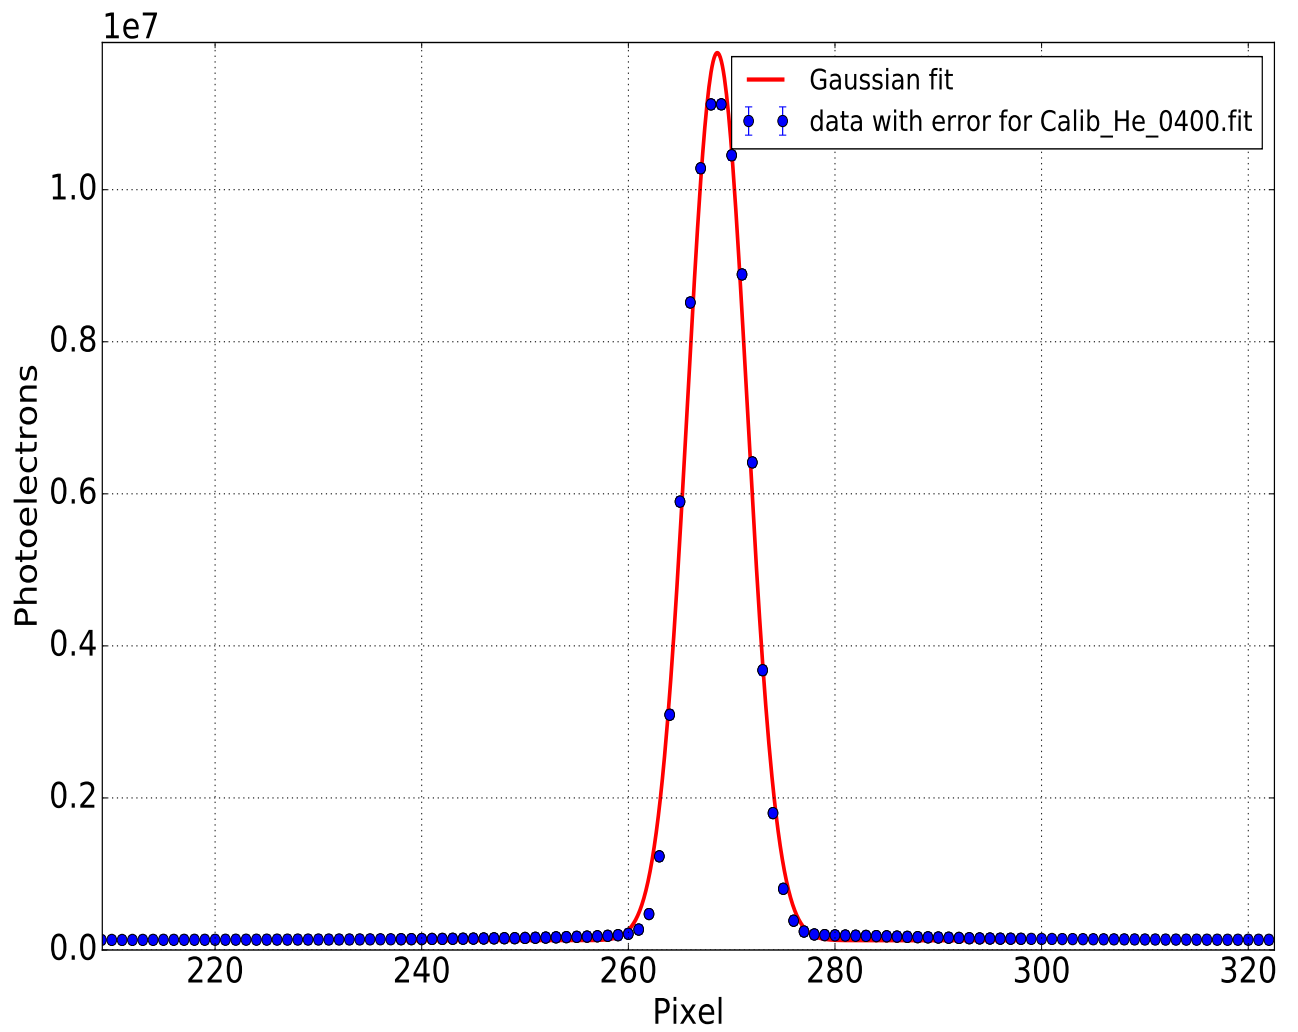

Figure 2: The error bar seems too small on this curve, however they are still present. The error on peak location for this specific spectral line was 0.0093 and it had a  $\chi^2$  value of 749.34.  $N_{\text{DOF}} = 56$ , therefore the  $\sigma_0$  is still an underestimate.

- Below is a table for the obtained  $\chi^2$  value and their corresponding error for each spectral line. For each line  $\sigma_0 = 6E4$ .

- Data for cadmium

| Micrometer (mm) | range | $\chi^2$ |         |        | Error on peak |        |        |
|-----------------|-------|----------|---------|--------|---------------|--------|--------|
|                 |       | line 1   | line 2  | line 3 | Peak 1        | Peak 2 | Peak 3 |
| 2.50            | 61    | 437.21   |         |        | 0.0216        |        |        |
| 3.00            | 61    | 63.66    |         |        | 0.0164        |        |        |
| 3.50            | 61    | 34.95    |         |        | 0.0171        |        |        |
| 5.00            | 61    | 1887.26  |         |        | 0.0091        |        |        |
| 5.50            | 61    | 1028.07  | 1469.41 |        | 0.009         | 0.0056 |        |
| 6.00            | 61    | 423.49   | 1405.93 | 461.57 | 0.0107        | 0.0059 | 0.0064 |
| 6.50            | 61    | 312.66   | 422.06  |        | 0.0105        | 0.0067 |        |

- Error on wavelength

| Micrometer (mm) | range | Error on wavelength |        |        |
|-----------------|-------|---------------------|--------|--------|
|                 |       | Peak 1              | Peak 2 | Peak 3 |
| 2.50            | 61    | 0.105               |        |        |
| 3.00            | 61    | 0.104               |        |        |
| 3.50            | 61    | 0.103               |        |        |
| 5.00            | 61    | 0.098               |        |        |
| 5.50            | 61    | 0.097               | 0.096  |        |
| 6.00            | 61    | 0.096               | 0.096  | 0.096  |
| 6.50            | 61    | 0.095               | 0.095  |        |

- The rest of the data follows similar pattern (All data on text file "Errors.txt").

- Plots of data and fit with error bars:

Figure 3: This shows the plot for the linear, quadratic and the cubic fit along with all data for micrometer setting of 2.0 mm, 2.5mm, 3.0mm and 3.5mm.

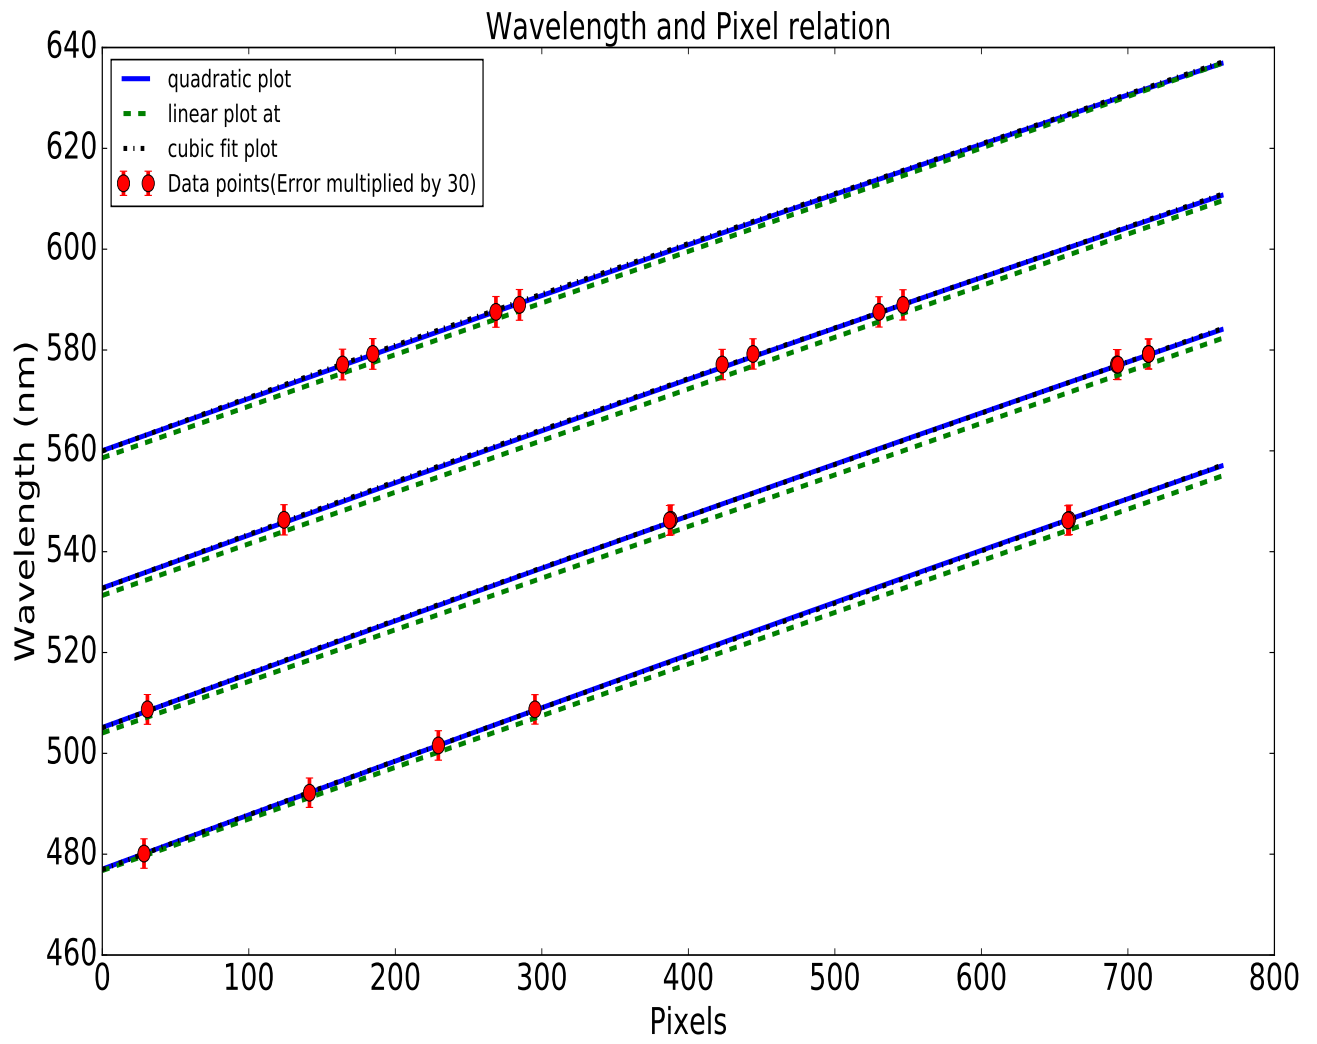

Figure 4: This shows the plot for the linear, quadratic and the cubic fit along with all data for micrometer setting of 4.0 mm, 4.5mm, 5.0mm and 5.5mm.

Figure 5: This shows the plot for the linear, quadratic and the cubic fit along with all data for micrometer setting of 6.0 mm, 6.5mm, 7.0mm and 7.5mm.

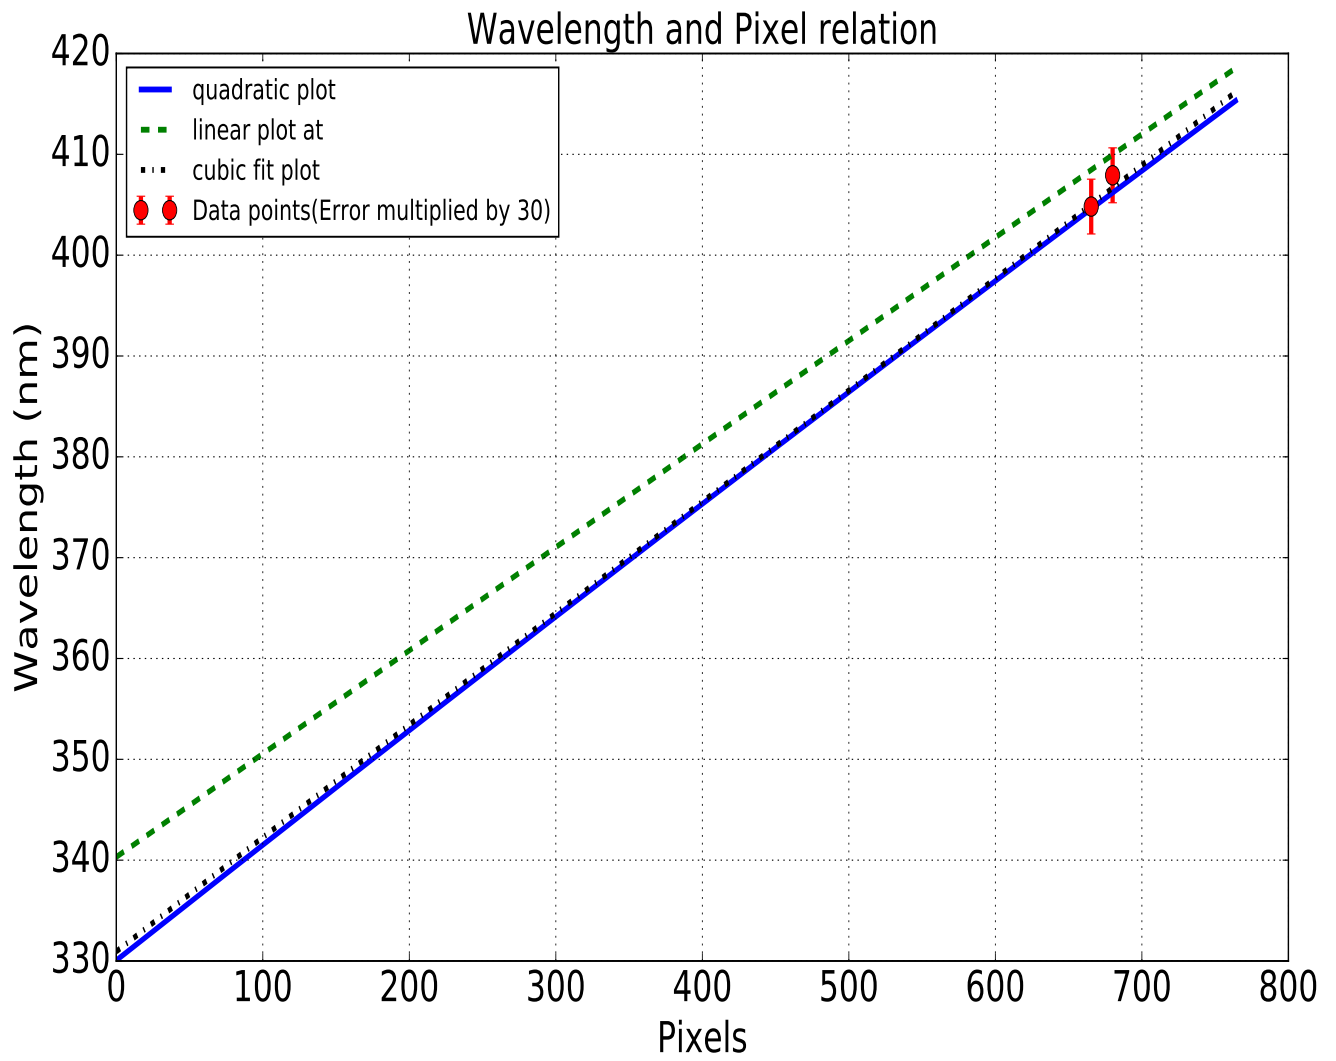

Figure 6: This shows the plot for the linear, quadratic and the cubic fit along with all data for micrometer setting of 8.0mm.

Table 1: This shows the  $\chi^2$  values for different fits.

| Parameters              | Linear fit | Quadratic fit | cubic fit |
|-------------------------|------------|---------------|-----------|
| $N_{\text{DOF}}$        | 46         | 43            | 39        |
| $\chi^2$                | 26832.36   | 973.96        | 710.67    |
| $\chi^2/N_{\text{DOF}}$ | 609.826    | 22.650        | 18.222    |
